Diploma in Accounting and Computer Programming
IIS Martino Bassi, Seregno | 2022

LANGUAGES

Italian | Native
English | B2

INTERESTS

Visual design, fitness, travel and Formula 1

ANDREA ANDRIYCHUK

IT ADMINISTRATOR | MICROSOFT 365 & WINDOWS SERVER

PROFILE

Part of a two-person IT team looking after 110–130 users at sites in Italy and Greece. I handle Microsoft 365 and Entra ID, the on-prem Windows Server and Active Directory side, backups, endpoint security and the helpdesk queue, and I write Python and T-SQL when a manual job is worth automating. EU citizen, open to relocating.

EXPERIENCE

IT Junior | CBC Europe S.r.l.

Varedo, Italy | February 2024 – Present

- Administer Microsoft 365, Exchange Online and SharePoint for 110–130 users: accounts, mailboxes, permissions and MFA.
- Manage Windows Server and on-prem Active Directory for all users, including directory sync with Entra ID.
- Worked on a network-wide DNS change so devices getting DHCP at all three sites register in the same DNS.
- Run Veeam backup jobs and do restores when files or systems need to be recovered.
- Helped move on-prem file shares to SharePoint and OneDrive, preparing data and permissions before the switch.
- Set up Freshworks from scratch for ticketing and asset inventory with device discovery; handle around 20–30 tickets a month.
- Manage Sophos XDR policies and alerts, run TryRiot phishing simulations, and work on VPN and network equipment for the three branches.
- Configured Bitrix24 CRM for the regional sales teams and wrote a Python script that syncs customers, destinations and products from SQL Server to the Bitrix24 middleware every night. The server runs SQL Express with no Agent, so the script triggers the export stored procedures itself and runs from Task Scheduler.
- Prepare Business Central data loads with RapidStart, checking and cleaning the source data in SQL Server first.

Metalworking Operator | Project One S.r.l.

Macherio, Italy | July 2022 – February 2024

- Assembled technical components for radiological collimators and helped train new colleagues.

PERSONAL PROJECTS

Homelab

Proxmox host running Linux VMs (2 Debian machines) and LXC containers. Docker container management for a self-hosted media server and a Minecraft server, Pi-hole for network-wide DNS filtering, NAT bridging and iptables port forwarding on a separate VM network, remote access through Tailscale.

CMS | In progress

Web project with Strapi CMS and MySQL on a Debian server; content model configured, frontend in planning.

I authorise the processing of my personal data in accordance with Regulation (EU) 2016/679 (GDPR).
